

PowerPoint force

Professional and rapid Flash-based presentations are now available to every non-technician. A simple click on a button will enable you to add narrations, animation and insert additional information into each slide of your MS PowerPoint® presentation.

PowerPointForce provides you with an intuitive menu and clear steps allowing you to create and transform your ideas into a single package multimedia package. In seven or less steps you'll be able to customize the presentation, enrich it using narrations and animation and deliver it to your audience.

PowerPointForce enables you to:

- Insert a HTML Page, Flash Movies, Flash Videos,
- Import a WordForce or QuizForce Production
- Publish your Presentation either to the Web or to an LMS
- Manage the slides in the Slide Manager
- Record Narrations for each individual slide
- Add attachments and notes to your presentation
- Create Fixed Presentation Templates

The PowerPointForce features have been carefully designed and selected following close consultation with teachers. You can collaborate with other authors and distribute the result in the Flash format usable for every viewer.

The publishing of the presentation in Flash will reduce the size of the presentation and as such the download time for the end user. In addition since the content is transformed to Flash you can view it in most browsers and do not require PowerPoint or PowerPoint viewer.

PowerPointForce will deliver high quality Multi Media Presentations that you can publish to your Intranet, your Website or your LMS. If your organization produces content for a Learning Management System then you can take advantage of the user-friendly SCORM-compliant technology.

In combination with QuizForce and WordForce it's a quick, easy and efficient way to create a presentation that only a technician could do before.

PowerPointForce
- creating Rapid e-Learning the best way!
